

## SRS for Online Shopping System.

18M18CS024  
Chandani Bagga

The online shopping system is used to reduce the time and effort required for normal shopping.

It helps in managing orders, customers, shopping costs admin etc.

- \* The system is used by a user who can be an admin, a session manager or customer.
- \* The admin handles actions like create and delete departments and categories of products.  
He can view the catalog details and update new product details or existing ones and can manage customers.
- \* The customer can register and login to the system, he/she can buy products by searching and also update their profiles.
- \* The session manager manages the sessions for a customer like listing products, getting customer details.
- \* A shopping cart feature exists which lists all the products a customer intends to buy.
- \* The various orders can be placed on the system by giving relevant order details.
- \* There exist different departments which contain various categories of products and their info.
- \* Once an order is placed the shipping info of the product must be available for product delivery to customer.
